At Presentation Systems, our integration services go beyond running cables, connecting components and plugging in power. We strive to understand the communications requirements of your organization. We have numerous years of experience servicing the needs of various sectors such as: business & industry, education, government, military, and churches.

Presentation Systems specializes in the complete design, engineering, installation, post-installation and maintenance of exceptional presentation and communication facilities.

Design & Engineering

Presentation Systems will work with architects, interior designers, and structural engineers to ensure that all systems are designed with ADA requirements, safety, and aesthetics in mind.

Project Management & Integration

System integration is the most logistically complicated and fastest moving part of your communications project. Our project managers monitor costs and will keep you updated with progress reports and modifications as they occur.

Field Installation & In-house rack fabrication

On-site installation is coordinated and managed by Presentation Systems

Installation Technicians, who have manufacturer certified training, allowing them to seamlessly integrate a finished product into your facility.

Documentation/ Project Administration

Presentation Systems can provide you with comprehensive "as-built" drawings system documentation, and project equipment manuals to better orient you with your system.

Service & Maintenance

Presentation Systems staffs a comprehensive technical services department comprised of engineers, field service technicians and support personnel committed to providing you with effective long-term service and maintenance.

When you purchase a system from Presentation Systems, you can feel confident that support and maintenance will extend beyond traditional manufacturer warranty protection.

Your Vision is Our Mission

Whether you are planning a small conference room or a television broadcast studio, Presentation Systems provides the design, equipment, installation, training, and follow-up support so you will always look great.

Our integrated systems enhance communication through large screen projection, video and audio teleconferencing, data/video walls, kiosks, computer networking, 3D displays, public address systems, closed-circuit television, simulator displays, and more. Each system is designed for maximum flexibility and ease of use and can be integrated into a variety of presentation environments.

Our highly experienced technicians are licensed and bonded to perform all aspects of audio-visual installation, and all systems are designed to satisfy current requirements, as well as accommodate future technologies. By combining cutting edge technology with cohesive solution packages and solid engineering, we have secured our position as the forerunner of visual communications integration.

Presentation Systems offers a complete line of projectors
in every category to fit your application.
